

WHAT IS CLAIMED IS:

1. An information processing system setting a parameter related to target data, comprising:
  - an output unit outputting the target data;
  - 5        an operation unit detecting a user's indication;
  - an output control unit changing a parameter value sequentially as the time elapses and outputting the target data with the parameter value set, from said output unit; and
  - 10        a processing unit establishing the parameter value when detecting the user's indication as a parameter value related to the target data.
2. An information processing system according to  
15        claim 1, further comprising a speed designating unit designating a speed of changing the parameter value.
3. An information processing system according to  
20        claim 1, wherein said output control unit linearly changes the parameter value.
4. An information processing system according to  
25        claim 1, further comprising a range specifying unit inputting an initial value and an end value between which the parameter value is changed.
5. An information processing system according to

claim 1, wherein said output unit simplifies and thus  
outputs the target data, and

said output control unit has the simplified target  
data outputted based on the parameter value that is to  
5 be changed.

6. An information processing system according to  
claim 1, wherein the target data are image data.

10 7. An information processing system according to  
claim 1, wherein the target data are sound data.

8. An information processing method setting a  
parameter related to target data, comprising:  
15 changing a parameter value sequentially as the time  
elapses and outputting the target data with the parameter  
value set;

detecting a user's indication; and  
establishing the parameter value when detecting the  
20 user's indication as a parameter value related to the  
target data.

9. An information processing method according to  
claim 8, further comprising designating a speed of changing  
25 the parameter value.

10. An information processing method according to

claim 8, wherein the parameter value is linearly changed.

11. An information processing method according to  
claim 8, further comprising inputting an initial value  
5 and an end value between which the parameter value is  
changed.

12. An information processing method according to  
claim 8, wherein the target data are simplified and thus  
10 outputted, and

the simplified target data are outputted based on  
the parameter value that is to be changed.

13. An information processing method according to  
15 claim 8, wherein the target data are image data.

14. An information processing method according to  
claim 8, wherein the target data are sound data.

20 15. A readable-by-computer recording medium  
recorded with a program making a computer set a parameter  
related to target data and execute:

changing a parameter value sequentially as the time  
elapses and outputting the target data with the parameter  
25 value set;

detecting a user's indication; and

establishing the parameter value when detecting the

user's indication as a parameter value related to the target data.

16. A readable-by-computer recording medium  
5 recorded with a program according to claim 15, further making said computer execute designating a speed of changing the parameter value.

17. A readable-by-computer recording medium  
10 recorded with a program according to claim 15, wherein the parameter value is linearly changed.

18. A readable-by-computer recording medium  
recorded with a program according to claim 15, further  
15 making said computer execute inputting an initial value and an end value between which the parameter value is changed.

19. A readable-by-computer recording medium  
20 recorded with a program according to claim 15, wherein the target data are simplified and thus outputted, and the simplified target data are outputted based on the parameter value that is to be changed.

25 20. A readable-by-computer recording medium recorded with a program according to claim 15, wherein the target data are image data.

21. A readable-by-computer recording medium  
recorded with a program according to claim 15, wherein  
the target data are sound data.

5

22. A program making a computer set a parameter  
related to target data and execute:

changing a parameter value sequentially as the time  
10 elapses and outputting the target data with the parameter  
value set;

detecting a user's indication; and

establishing the parameter value when detecting the  
user's indication as a parameter value related to the  
15 target data.

23. A program according to claim 22, further making  
said computer execute designating a speed of changing the  
parameter value.

20

24. A program according to claim 22, wherein the  
parameter value is linearly changed.

25. A program according to claim 22, further making  
25 said computer execute inputting an initial value and an  
end value between which the parameter value is changed.

26. A program according to claim 22, wherein the target data are simplified and thus outputted, and the simplified target data are outputted based on the parameter value that is to be changed.

5

27. A program according to claim 22, wherein the target data are image data.

28. A program according to claim 22, wherein the  
10 target data are sound data.
